

Coronavirus (COVID-19) response and support services

With the increase of Covid-19 (novel coronavirus) cases in the UK and the decision from the government to move from “containment” to a “delay” stage the focus is now turning to reducing the risks from the virus now there is clear evidence of community transmission within the UK, this is creating a huge challenge for all building operators.

- Are you struggling with the reduced use or closure of your property?
- Are you trying to maintain safe services within your premises?
- Are you concerned about the standard of cleanliness of your building?

Reducing building use or even short-term closure will impact on the overall health of your premises. Therefore SMS Environmental has considered how best we support our customers during this period.

In addition to increasing our capability to deliver safe building services such as **disinfection & flushing of infrequently used water systems** we will be further supporting our customers with **deep clean services**, ensuring that premises which could be affected are expertly and professionally maintained both in the short and long term from one of your trusted suppliers.

Should you have any questions or require any further information then please do not hesitate to contact us.

Disinfection of Water Systems

Whilst the potential for the growth of legionella bacteria is the main reasons why you may carry out some form of water treatment, there are many other benefits and reasons for doing so. Applying water treatment processes to systems can save time and money associated with equipment down time and repair.

Flushing Infrequently Used Outlets

During periods of little use it is important your water system is not neglected.

Periodic flushing achieves circulation of water in outlets and the associated pipework. It is one of the most effective ways of maintaining control of bacteria in your system and is a recommendation of HSE guidance.

Record keeping of what outlets and when they are flushed remain important. Without records it is very difficult to convince others that a task has been completed so this should **not be** forgotten even during periods of disruption.
